DETAILED ACTION

This Office Action is in response to a Response filed on 9/1/2005.

Currently, claims 1-10 are pending.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 4 and 6-10 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No.

6,951,782. Although the conflicting claims are not identical, they are not patentably distinct from each other because the select gate (140) is formed before the floating gate (160.2) (col. 3, line 61-col. 4, line 13); and is formed with dielectric (810) around the select gate. The memory cell comprises two source/drain regions and a channel region which borders on the source/drain.

3. Claims 2-3, and 5 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No. 6,951,782 in view of Fan et al. (U.S. Patent No. 6,747,310 filed 10/7/2002). Fan discloses the formation of a floating gate (31) and control gate (32) formed adjacent a memory cell. It would be obvious to one of ordinary skill in the art at the time the invention was made to form a control gate in order to form a memory cell that is very small in size that provides significantly enhanced programming and erase performance (col. 1, line 66-col. 2 line 2).
